JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Passengers of outgoing vessels not inspected.....	84
Certificates of immunity to yellow fever issued.....	36
Persons entering Triscornia for observation prior to sailing.....	60
Persons transferred from Triscornia to vessels.....	87
Vessels fumigated prior to sailing.....	10

The yellow fever situation has improved somewhat since my last report. There have been no further cases reported from Campo Florido and the 2 noted last week have been discharged, recovered. At Palos, where conditions were very disquieting, there were no new cases, and but 1 case remains under treatment. A new focus appeared, however, near the border of Habana Province, at Trinidad plantation, adjoining Union de Reyes, and another at Alacranes, where the disease has been reported at intervals throughout the summer. The 2 cases at Trinidad have been discharged.

In Habana 1 new case was announced, October 14, in the person of a Spanish woman who had not been out of the city for several months. The case was considered a grave one from the beginning, and death resulted on October 16. On the same date the diagnosis of yellow fever was made in the case of a patient at Las Animas Hospital, this city, from Cienfuegos.

A résumé of all fever reports to date for the current year shows: For Habana, 5 cases and 1 death; for the interior, 117 cases and 32 deaths; total, 122 cases and 33 deaths. There are 5 cases under treatment.

Quarantine against Veracruz was lifted on October 15 by the national sanitary department. The detention camp at Triscornia is, in consequence, used exclusively for passengers bound for southern ports.

October 25. Fatal case of yellow fever at Jaruco, Habana Province, near Campo Florido—Cuban boy, aged 10.

October 26. Second fatal case of yellow fever at Jaruco, Cuban child in same family as case reported yesterday.

October 28. One new case of yellow fever from Bermeja, Matanzas Province, isolated at Alacranes; Spaniard, taken sick October 24.

Report from Mantanzas—Inspection and fumigation of vessels—yellow fever.

Acting Assistant Surgeon Nuñez reports, October 15:

Week ended October 12. Bills of health issued to 3 vessels leaving for United States ports; 2 health and acclimation certificates issued to passengers bound to New Orleans via Habana, and 2 vessels, the British schooner *Prosperare*, with 9 in the crew, no passengers, and the Norwegian steamship *Ole Bull*, having a crew of 20 and no passengers, both bound for Mobile, Ala., were fumigated October 9 and 10, respectively.

No quarantinable diseases were reported during the week.

October 30. One case of yellow fever confirmed to-day, originating this city; isolated Avel Hospital; case detected on the third day of the disease.
